

CROMARIS DENTEX

Adriatic Dentex - the jewel in the crown of Cromaris fresh fish assortment and one of the most valued native Mediterranean species

- Dentex belongs to the porgy (*Sparidae*) family. Apart from the Adriatic, it can also be found in the Mediterranean and the Eastern Atlantic.
- Dentex is of solid build, especially the front part of the head with its strong jaws and very large, sharp fangs after which it got its name. It has an elongated, but also quite tall body. Its ventral part is colored in a recognizable mixture of pink, silver and white, while its tail fin is pink with a black rim.
- Dentex is one of the most popular fish species, but at the same time a very sensitive and demanding farming species. Cromaris started the production of Dentex in 2019 and is now proud to be the only producer in the world to be able to offer Dentex all year round.
